***Allowable Subject Matter***

1. Claims 1, 7-12, 14-18, and 21-28 are allowed. The following is an examiner's statement of reasons for allowance: In interpreting the claims, in light of the specification, the Examiner finds the claimed invention to be patentably distinct from the prior art of record.
2. In regards to statutory subject matter, the Examiner interprets the claim language of "means for" in regards to 112 6<sup>th</sup> paragraph of independent claims 12 and 28 to be hardware as recited in applicant's specification on page 9, lines 18-23 which states, "All these means 10-14 and 20-29 can be incorporated either at the client station U or at the server station H in a computer as shown in FIG. 2. This computer comprises, in a typical manner, a microprocessor 30, a read only memory 31 (ROM) and a random access memory 32 (RAM) comprising different registers for implementing the method according to the invention."
3. **Wilkins (2004/0027593)** teaches a method to improve the performance of rendering image data (402) by converting what would normally be considered resolution-dependent image behavior into behavior that is substantially resolution-independent. This allows significant performance improvement since the rendering (454) can be performed on the lower-resolution image data used, for example, for on-screen viewing and when the image effect is applied to a higher resolution rendering, the effect, as viewed, is substantially the same as the effect viewed at a lower resolution. This conversion of normally resolution-dependent behaviors into pseudo-resolution-independent behaviors also allows the image effects to be applied to be

carried out on a lower resolution image with confidence that when the image is rendered at a higher resolution that the image effects applied will substantially have the same appearance that the effect had at the lower resolution (**Wilkins, abstract, figure 4, and corresponding text**).

4. **Zalewski et al. (6,771,981)** teaches a changeable cover for an electronic device and method of using same in a payment system is provided. The cover has a transponder responsive to interrogation by an electric field. The cover provides an electronic identification number and other information in response to the interrogation signal. Also provided is a system for making payments, comprising at least one mobile station (4) which has an associated cover (100) for providing local data transfer. The system also comprises at least one point of sale terminal or the like, which has a second transceiver for providing data transfer (**Zalewski, abstract, figure 2B, and corresponding text**).

5. However, the prior art of record fail to teach or suggest individually or in combination the claimed limitations of independent claims 1 and 12, wherein the undo cost is zero if the number of requests for executions of undone functions sent by the client station is less than a predetermined threshold value, correlating to page 14, lines 20-23 of applicant's specification that state, "Each client station U will benefit from a certain undo "credit" so that the undo cost will be zero if the number of undo requests n sent by the client station U remains below a predetermined threshold value T." And the prior art of record fail to teach or suggest individually or in combination the claimed limitations of independent claims 23 and 28, wherein the undo cost is increased with

Art Unit: 2144

each new undo request if the number of undo requests sent by the client station is higher than a predetermined threshold, which correlate to page 14, lines 17-19 of applicant's specification that state, "In practice, the undo cost C.sub.A will be increased with each new undo request received by the server station H and sent out by a same client station U.sub.A of the communication network."

6. These limitations, in conjunction with the other limitations in the independent claims 1, 12, 23, and 28 are not specifically disclosed or remotely suggested in the prior art of record. Therefore, claims 1, 7-12, 14-18, and 21-28 are allowed.

7. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ranodhi Serrao whose telephone number is (571) 272-7967. The examiner can normally be reached on 8:00-4:30pm, M-F.
